CMST386

<center>PROJECT 1 – REFLECTION</center>

I found many challenges with this project especially with linking to the style sheet from within the project 1 folder. I had forgotten that whenever a link needs to go up to an upper folder, two dots need to be included in the link, for example (../project_1/project1.html). The second issue I had was avoiding the use of divs on everything like the way I did in CMST385, I struggled with finding the right tags but with the help of the W3Schools Website, I was able to understand the benefits of semantic tags. The third and final struggle was with the hover menu because I had done a normal navigation menu and thought I was finished until I read section *e. Navigation* where it said that I had to create a hover menu. It took me a while but I was able to understand how *display:none;* was the key to hiding the menu until someone hovers over it.

In conclusion, the project was challenging to me but at the same time, I was able to learn a lot about semantics and the overall design of a website.

The following are the screenshots of all the validations:

Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Showing results for http://nova.umuc.edu/~ct386a10/index.html

Checker Input

Show ☐ source ☐ outline ☐ image report   Options...

Check by address ▼

http://nova.umuc.edu/~ct386a10/index.html

Check

Document checking completed. No errors or warnings to show.

Used the HTML parser. Externally specified character encoding was UTF-8.

Total execution time 40 milliseconds.
